F²MC-16 Family EMULATOR LQFP-100P PROBE HEADER <u>MB2147-584-E</u> OPERATION MANUAL

PREFACE

Thank you for purchasing the LQFP-100P*¹ probe header (model number: MB2147-584-E) for the F^2MC^{*2} -16 family emulator.

MB2147-584-E is a header board^{*3} used to connect the F²MC-16L/16LX emulator (model number: MB2147-01-E)^{*4} and the F²MC-16L/16LX emulator PGA-299P adapter board (model number: MB2147-20-E)^{*5} to the user system that uses fujitsu microcontroller F²MC-16LX family MB90F947 (LQFP-100P).

The manual explains how to handle the LQFP-100P probe header for the F^2MC-16 family emulator. Before using the MB2147-584-E, be sure to read this manual.

Please contact the sales or support representative for details on the mass production and evaluation MCU models that can be used with this product.

- *1: The package is the FPT-100P-M05 (Lead pitch: 0.5mm; Body size: 14mm × 14mm).
- *2: F²MC is the abbreviation of FUJITSU Flexible Microcontroller.
- *3: Referred to as "header board" in this manual.
- *4 : Referred to as "emulator" in this manual.
- *5: Referred to as "adapter board" in this manual.

Handling and use

Refer to the following manuals for the handling and use of MB2147-584-E and notes regarding safety use.

- F²MC-16L/16LX EMULATOR MB2147-01-E OPERATION MANUAL
- F²MC-16L/16LX EMULATOR ADAPTER BOARD for PGA-299P MB2147-20-E OPERATION MANUAL

European RoHS compliance

Products with a -E suffix on the part number are European RoHS compliant products.

Notice on this document

All information included in this document is current as of the date it is issued. Such information is subject to change without any prior notice.

Please confirm the latest relevant information with the sales representatives.

Caution of the products described in this document

The following precautions apply to the product described in this manual.

Indicates a feature that, if not used correctly, may result in minor or moderate injuries, and which may cause the customer system to malfunction.

Cuts	This product has parts with sharp points that are exposed. Do not touch edge of the product with your bare hands.			
Damage	When connecting the header board to the user system, correctly position the index mark (\blacktriangle) on the NQPACK mounted on the user system with the index mark (\blacktriangle) on the header board, otherwise the emulator system and user system might be damaged.			
Damage	When mounting a mass production MCU, correctly position pin 1, otherwise the mass production MCU and user system might be damaged.			

• The contents of this document are subject to change without notice.

- Customers are advised to consult with sales representatives before ordering.
- The information, such as descriptions of function and application circuit examples, in this document are presented solely for the purpose of reference to show examples of operations and uses of FUJITSU MICROELECTRONICS semiconductor device; FUJITSU MICROELECTRONICS does not warrant proper operation of the device with respect to use based on such information. When you develop equipment incorporating the device based on such information, you must assume any responsibility arising out of such use of the information. FUJITSU MICROELECTRONICS assumes no liability for any damages whatsoever arising out of the use of the information.
- Any information in this document, including descriptions of function and schematic diagrams, shall not be construed as license of the use or exercise of any intellectual property right, such as patent right or copyright, or any other right of FUJITSU MICROELECTRONICS or any third party or does FUJITSU MICROELECTRONICS warrant non-in-fringement of any third-party's intellectual property right or other right by using such information. FUJITSU MICROELECTRONICS assumes no liability for any infringement of the intellectual property rights or other rights of third parties which would result from the use of information contained herein.
- The products described in this document are designed, developed and manufactured as contemplated for general use, including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (1) for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could have a serious effect to the public, and could lead directly to death, personal injury, severe physical damage or other loss (i.e., nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system), or (2) for use requiring extremely high reliability (i.e., submersible repeater and artificial satellite).

Please note that FUJITSU MICROELECTRONICS will not be liable against you and/or any third party for any claims or damages arising in connection with above-mentioned uses of the products.

- Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.
- Exportation/release of any products described in this document may require necessary procedures in accordance with the regulations of the Foreign Exchange and Foreign Trade Control Law of Japan and/or US export control laws.
- The company names and brand names herein are the trademarks or registered trademarks of their respective owners.

1. Checking the Delivered Product

Before using the MB2147-584-E, confirm that the following components are included in the box:

• LQFP-100P header board*1 : 1	L
• Screws for securing the header board (M2 \times 10mm, 0.4mm pitch) : 4	ł
• Washer : 4	ł
• NQPACK100SD-ND*2 : 1	
• HQPACK100SD*3 : 1	
• Operation manual (Japanese version) : 1	
• Operation manual (English version, this manual) : 1	L

- *1: Header board (manufactured by Tokyo Eletech Corporation, referred to as the "YQPACK"), mounts YQPACK100SD-4W.
- *2: The IC socket (manufactured by Tokyo Eletech Corporation, referred to as the "NQPACK" in this manual). The NQPACK includes a specialized screw driver and three guide pins. A more reliable compatible socket, the NQPACK100SD-ND-SL (sold separately; manufactured by To-kyo Eletech Corporation), can be used by making a screw hole in the user system board for affixing the IC socket.
- *3: The IC socket cover (manufactured by Tokyo Eletech Corporation, referred to as the "HQ-PACK" in this manual). The Includes four screws (M2 × 6mm, 0.4mm pitch) for attaching the HQPACK.

MB2147-584-E can function as the adapter unit when used in combination with the adapter board (sold separately).

Please contact the sales or support representative for details on the adapter board and emulator that can be used with this product.

2. Handling Precautions

The header board is precision-manufactured to improve the dimensional accuracy and to ensure a reliable contact, and is therefore mechanically weak. To ensure a correct use of the header board in the proper environment, observe the following:

• Avoid placing a stress on the NQPACK mounted on the user system when connecting the header board.

3. Notes on Designing

Notes on designing printed circuit board for the user system

When the header board is connected to the user system, the heights of parts mounted around the header board are restricted.

When the printed circuit board for the user system is designed, consider the height of the parts so that components mounted to the user system and the header board do not interfere within range of the header board as shown in Figure 1.

Figure 1 Header board dimensions

MCU footprint design notes

Figure 2 shows the recommended footprint dimensions of the NQPACK mounted on the printed circuit board for the user system.

Take this footprint into consideration as well as the recommended footprint of the mass production MCU when designing the printed circuit board for the user system.

For details of the footprint, contact the Tokyo Eletech Corporation.

*2: It is a position of the screw hole (φ2.2mm) for securing IC socket made when mounting the optional NQPACK100SD-ND-SL (manufactured by Tokyo Eletech Corporation). When not using the NQPACK100SD-ND-SL, it is not necessary to puncture the hole.

Figure 2 Dimensions of the footprint for mounting the NQPACK

4. Connecting to the User System

Before using the MB2147-584-E, mount the supplied NQPACK on the user system. To connect the header board to the adapter board, use the two lines of the flat cables (standard or long) supplied with the emulator sold separately. Refer to the hardware manuals of the emulator or the adapter board for how to connect the flat cable.

Connecting

- To connect the header board to the user system, match pin 1 indicated by the index mark (▲) on the NQPACKmounted on the user system with the index mark (▲) on the header board and then insert it (see "Figure 3"). The pins of YQPACK are thin and easily bent. When you are connecting the YQPACK to the NQPACK, ensure that the YQPACK pins are not bent before pushing it all the way into the NQPACK.
- Insert each screw for securing header board through the washer in each of the four screw holes on the header board and then tighten the four screws diagonally in equal forces, using the special screwdriver supplied with the NQPACK (see "Figure 4").

Be careful not to over-tighten the screws as this may result in bad connections.

Figure 4 Header board connection

Disconnection

To disconnect the header board from the user system, remove all of the four screws, and then pull the header board vertically from the NQPACK.

5. Mounting Mass Production MCUs

To mount a mass production MCU on the user system, use the supplied HQPACK.

Mounting

- 1. To mount a mass production MCU on the user system, match the index mark (▲) on the NQ-PACK mounted on the user system with the index mark (●) on the mass production MCU.
- Confirming beforehand that the mass production MCU is correctly mounted on the NQPACK, match the index mark (a linear angle cut made only on one corner) of HQPACK with the index mark of NQPACK, and insert it (see "Figure 5"). The pins of HQPACK are thin and easy to bend. Insert NQPACK after confirming that the pins of HQPACK are not bent.
- 3. Insert each screw for securing HQPACK in each of the four screw holes on the HQPACK and tighten the screw diagonally.

To tighten the screws, tighten them evenly using the special screw driver that was included with the NQPACK. Tightening the screws too tight might result in a defective contact.

Disconnection

To remove the HQPACK, remove all of the four screws, and pull out the HQPACK vertically from NQPACK.

6. Connector Pin Assignment

The signal of evaluation MCU with which it was carried on the adapter board is connected to YQ-PACK (the same assignments as production MCU) via the flat cable connector (B1, B2) on the header board.

The adapter board and the header board are connected by the two flat cables (standard or long) supplied with the emulator (sold separately). Refer to the operation manual of the emulator or an adapter board for how to connect.

For details of a mass production MCU pin, refer to the data sheet or hardware manual of each MCU.

Pin assignment

Tables 1 and 2 list the pin assignments mapping among the flat cable connector(B1, B2), the evaluation MCU on the adapter board, and the production MCU.

For details on the names of signal conductors of the evaluation MCU, refer to the operation manual of the adapter board.

The following notes are related to the tables.

- "-" : Unconnected pin (left open).
- : Vcc

The power supply (Vcc) pin number of evaluation MCU is as follows.

Vcc = 24, 72, 85, 90, 228, 246, 298

The power supply (Vcc) pin number of mass production MCU is 13, 88.

: Vss

The ground (Vss) pin number of evaluation MCU is as follows.

Vss = 73, 102, 152, 161, 171, 249, 254, 265

The ground (Vss) pin numbers of production MCU are 14, 42 and 89.
